

**DRAIN MEASUREMENT RECORD**

This is a place to record how much fluid is collecting in each drain. Please **bring this with you each time you come to the office.**

- Make sure you are taking an antibiotic medication as long as you have a drain. Your antibiotic is probably either cephalixin, azithromycin, clindamycin, or sulfamethoxazole. Call the office for a refill if you are running out of your antibiotic or if you do not know which antibiotic you are taking. Remember, if you have a drain, you should be taking an antibiotic.
- Measure and record in **cc's** (also known as **ml's**) the amount of fluid collected in each drain **three times a day.**
- Record the date in the first column and the time of day you are doing the measurement in the second column.
- Record the amount you measure from your first drain in the column labeled "Drain 1", the amount you measure from the second drain under "Drain 2", and so on.
- Call us if you have any questions about your drains!

DATE	TIME	DRAIN 1	DRAIN 2	DRAIN 3	DRAIN 4	DRAIN 5	DRAIN 6
